## A Slide with Code

```
from dataclasses import dataclass
from typing import Any
import boto3
import graphene
import json

def call_lambda(client, function_name, request_payload={}):
    result = client.invoke(
        FunctionName=function_name,
        Payload=json.dumps(request_payload),
    )

    return json.loads(result["Payload"].read())
```
